The Spa Doctor

FALL/WINTER OZONATOR SPECIAL

Almost all modern hot tubs are equipped with an ozone generator to provide primary disinfection of your spa water. Many of these ozone generators have a life expectancy of approximately three years, and after that time may need to be replaced. Please give us a call if your hot tub is more than three years old, and we will be happy to check if your ozonator is still functioning, and if not, install a new ozonator for only \$150.00* complete. Please read further for some frequently asked questions about ozone, what it does and how it helps your hot tub's performance. Call to set up your appointment to have your ozonator checked and if necessary, replaced.

**Working hot tubs with ozonator plumbing connections installed. New ozonator installation slightly higher.*
